

# The order of passing bells at 3-4 dodges in Plain Bob

## Notes

- The upper diagram is 3-4 UP dodge.
- The lower diagram is 3-4 DOWN dodge.
- You are ringing the **Blue** bell.
- The numbers are your count.
- For completeness the full work of A & B is shown. i.e. In the upper diagram **B** is dodging 3-4 DOWN and **A** is making 2nds to the **Treble**.
- The important difference between the two dodges (up & down) is where you meet the **Treble**. Think of the dodges as a short “Blip” in the general direction you are going in. If you are dodging UP your general direction is UP – If you are dodging down your general direction is down.
- In BOTH cases you follow the treble in 3 when you are nearest the front. In 3-4 up this will be just before the dodge In 3-4 down it will be just after the dodge.
