

Making your tower as safe as possible

THE CENTRAL COUNCIL OF CHURCH
BELL RINGERS

How can you make your tower a safe place to ring during Covid-19?

This second guidance note in a set of six considers how we make bell towers and ringing environments as safe as possible. It should be considered in conjunction with the church's own risk assessments and Health and Safety Policies.

Overall Guidance is still to:

- Be meticulous in our hand hygiene
- Maintain social distancing
- Reduce the number of people with whom we interact

Also follow the usual church and tower risk assessment and Health & Safety policies

Is your tower able to provide a safe place for ringing?

- Check first that the bells and tower are in a safe mechanical condition to ring (this is normally done by the steeple keeper or equivalent, but should always be done by someone with appropriate knowledge and experience)
- Limit the amount of ringing in a session to no more than 15 minutes, and leave 72 hours before the next session
- Restrict the number of ringers (just enough to ring) and ensure that they will not need assistance
- Make sure bells can be rung which are 2 metres apart
- If you want to ring all your bells, you will either need Perspex screens between bells or additional PPE
- Limit the number of things that can harbour the virus and that different people may touch – put away or mark off “clutter” that is not needed for ringing
- Maintain good ventilation – air changes are important in reducing the risk of virus transmission
- Don't have refreshments in the tower

Perspex Screens?

Perspex screens are being used for shielding in other environments. If it were practical to install them in your tower it could enable more bells to be rung.

15 Minutes Ringing?

There a linear relationship between time spent in an environment and the risk of infection. First and foremost, we are ringing for services. This is a start.
